This research-based book takes an organization-wide perspective to describe the governance and governmentality for projects in organizations. Governance of projects defines and directs the ways managers of projects, programs, and project portfolios carry out their work. Governmentality is the way the managers of these managers present themselves to those they lead. Governance and Governmentality for Projects starts with introducing existing theories, models and paradigms for governance and governmentality. It then develops a chronological framework of the ways governance and governmentality for projects is enabled in organizations, how it subsequently unfolds in organizations of different types and sectors, and the consequences of different governance approaches for project results, trust, control, and ethical issues in projects. Special emphasis is given to the link between corporate governance and the governance of

project, programs and project portfolios. Three real-life case studies exemplify the research findings described in the book. Through its structure this book describes the development of governance and governmentality in the realm of projects from its organizational origins, via observable practices, to expected consequences of different implementations. Aimed at academics, post-graduate students in business and management, reflective practitioners, standards or policy developers, those in governance roles and others in need of a detailed knowledge of the spectrum of project related governance in organizations, this book will help develop a comprehensive understanding of the theoretical and practical underpinnings of the subject, their interaction, and implications for implementation. This allows for understanding and developing of both generic and idiosyncratic governance structures, such as those needed in project-based organizations. Enriching understanding of the current theoretical debate on project-based learning and R&D sourcing, 'Project-based Knowledge in Organizing Open Innovation' draws on innovation literature and knowledge-based perspectives to solve open problems in the relationship between knowledge development at project level and how firms organize product innovation combining in-house R&D activities with inbound open innovation. Through field research in different industrial settings (pharmaceutical, automotive and machine tools) and with complementary methodological approaches, this book provides empirical evidence on how project knowledge features affect sourcing decisions at firm level. Due to the emerging interest in the management literature on project-based organizations and on the relevance of project forms of organizing in a knowledge-based economy, this volume will appeal to scholars and students in business and management, in particular those in innovation management, organization theory and strategic management. Addressing the still open issue of how the firm level should be complemented by studies at the project level of analysis, this book provides theoretical and empirical arguments on the advantages of a more fine-grained level of analysis to understand how firms organize their innovation processes across boundaries.
