Annual Report Dec 29 2022

Mapping irrigated areas in the Limpopo Province, South Africa Apr 01 2023 This report summarizes the findings of a collaborative effort to map and assess irrigated areas in the Limpopo Province, South Africa. The study was conducted by the International Water Management Institute (IWMI) in collaboration with the Department of Agriculture, Forestry and Fisheries (DAFF) and the Limpopo Department of Agriculture and Rural Development (LDARD), as part of the DAFF-supported 'Revitalization of irrigation in South Africa' project. Based on a combination of Landsat and Moderate Resolution Imaging Spectroradiometer (MODIS) satellite data, previous irrigated area mapping exercises carried out by DAFF and three-field ground truthing (GT) surveys, a total of 1.6 million hectares (Mha) of cropland were identified, with 262,000 ha actually irrigated in the 2015 winter season. The study also found that only 29% of all land equipped with center pivots was actually irrigated.

Green Economy in the Transport Sector Feb 16 2022 This open access book is interdisciplinary and provides cross-sectoral and multi-dimensional exploration of sustainable development and transportation in South Africa. Drawing on work from different disciplines, the book contributes not only to academia but also seeks to inform urban and regional policy with the view of contributing to the national aspirations of South Africa as espoused in the National Development Plan (NDP), 2030, National Spatial Development Framework (NSDF) Draft (2019), National Climate Change Adaptation Strategy (NCASS) Draft (2019), Green Transport Strategy for South Africa (2018–2050), and National Transportation Plan (NATMAP), 2050. Adopting a multi-dimensional assessment, the book provides a background for co-production concerning climate change, sustainable development, and transportation in the Global South. The book contributes in its analysis of the institutional and legislative framework that relates to the climate change, skills and knowledge transfer, sustainable development, and transportation in South Africa, as these are responsible for the evolution of the green economy and transport sector in the country. The connections among different sectors and issues such as environment, transport modes, technology innovation, vehicle management and emission control, skills and knowledge transfer, legislative and policy framework, and the wider objectives of the sustainable development goals (SDGs), especially goals 11 to 13. The success stories relating to climate change, sustainable development, and transportation in South Africa are identified together with the best possible practices that may inform better environmental, urban and regional planning, policy, practice, and management.

Agroforestry Jul 12 2021 The book is a collection of chapters that deal with agroforestry systems on small farms. It compiles a variety of suitable agroforestry systems that can both sequester carbon and mitigate climate change while also providing socio-economic benefits. The book also discusses the ways in which small landholders can use agroforestry to combat land degradation.

The Sustainable City VII Mar 27 2020 Containing research on sustainable urban redevelopment presented at the latest in a biennial series organised by the Wessex Institute of Technology, this book addresses an area of growing interest. The conference series was first held in 2000. These proceedings are split into two volumes. Urban areas produce a series of environmental challenges arising from the consumption of natural resources and the consequent generation of waste and pollution, contributing to the development of social and economic imbalances. All these problems, which continue to grow in our society, require the development of new solutions. Topics include: Volume I – Urban Strategies; Eco-town Planning; Planning, development and management; Planning, development and management for urban conservation and regeneration; Case studies; Landscape planning and design; Environmental management; Intelligent environments and emerging technologies. Volume II – Sustainable energy and the city; Waterfront developments; The community and the city; Quality of life; Cultural heritage issues; Transportation; Planning for risk; Planning for risk; Transport models in emergency conditions; Industrial wastes as raw materials; Waste management; Safety and security; The city heritage.

Inclusive Businesses in Agriculture Jun 30 2020 Inclusive business is hailed as a win-win scenario for the development of poor communities; yet there is little insight into how these inclusive businesses work and, more importantly, for whom. This book aims for a thorough understanding of the range of inclusive businesses in agriculture by examining: the structures they implement, the actors involved, and whether they are effectively inclusive of smallholders. It presents a range of case studies and is therefore empirically based and practically oriented. By offering a critical assessment of inclusive businesses overall, it allows for a better perception of what works where, and under which conditions. It provides useful insights that will benefit smallholders, agri-businesses, support groups, policy makers and investors who are willing to promote more inclusive businesses, that foster a better integration of smallholders into commercial value-chains and a more equitable and sustainable agricultural sector.

Annual Sep 25 2022

Sustainable Agricultural Value Chain Apr 28 2020 The book discusses scientific, technical, and sociological aspects of sustainable agricultural value chains, focusing on coffee and tea production. The book advocates a value-chain strategy and highlights the importance of tracking the effects of climate change. Increasing the amount of value-added products via irrigation is critical to combating climate change and achieving sustainable development. Furthermore, blockchain technology has the potential to transform agricultural business models and supply chain networks.

Water Pollution XI Aug 13 2021 Water pollution is by necessity an interdisciplinary field involving scientists and professionals with a wide range of expertise. It also transcends national borders, since the contamination of water resources is a problem of global concern. The International Conference on Modelling, Monitoring and Prevention of Water Pollution, held biennially in different locations around the world, has been providing a forum for the presentation and discussion of the latest developments in the field since 1991. The papers in this volume present some of the latest results in this important field; work which is essential to understanding the nature of the problem and for proposing appropriate solutions, which may eventually provide the guidelines required to take steps towards the remediation or recovery of water resources. Water Pollution XI contains papers presented at the latest (Eleventh) Conference and includes the following topics: Water quality; Groundwater and aquifer issues; Environmental monitoring and control; Remediation; Pollution prevention; Lakes and rivers; Agricultural contamination; Wastewater treatment and management; Offshore pollution and oil spills; Emerging technologies; Biosensors; Health risk studies; Nano-particles; Socio-economic costs; Biosystems; Education and training.

Challenges Facing the Limpopo Department of Public Works with Regard to Service Delivery Feb 04 2021

Water is Life Nov 15 2021 This book approached water and sanitation as an African gender and human rights issue. Empirical case studies from Kenya, Malawi, South Africa and Zimbabwe show how coexisting international, national and local regulations of water and sanitation respond to the ways in which different groups of rural and urban women gain access to water for personal, domestic and livelihood purposes. The authors, who are lawyers, sociologists, political scientists and anthropologists, explore how women cope in contexts where they lack secure rights, and participation in water governance institutions, formal and informal. The research shows how women - as producers of family food - rely on water from multiple sources that are governed by community based norms and institutions which recognise the right to water for livelihood. How these common pool water resources - due to protection gaps in both international and national law - are threatened by large-scale development and commercialisation initiatives, facilitated through national permit systems, is a key concern. The studies demonstrate that existing water governance structures lack mechanisms which make them accountable to poor and vulnerable water users on the ground, most

importantly women. The findings thus underscore the need to intensify measures to hold states accountable, not just in water services provision, but in assuring the basic human right to clean drinking water and sanitation; and also to protect water for livelihoods.

Research in action Dec 05 2020 Research in action engages the researcher who wants to live up to the challenges of contemporary science and to contribute to innovation and social change. This ambition to contribute to change raises many questions. How to define the main target group of the research? What role does this group play in the research? Which methods of data collection are most appropriate? Who are the commissioners of the research and do their interests match with those of the prime target group? How to deal with power relations in research situations? What do these issues mean for the relation of researcher with the people in the researched situation? And, last but not least, what does it all imply for the researcher him- or herself? These questions have to be dealt with in situations in which the design and organization of the research is still open but also in situations where these have already been preformatted through the research proposal or earlier developments. In any case, they have to be framed in the theoretical considerations of what is science. This book aims to assist scholars and practitioners who would want to deal with this kind of research and questions. The book does not offer recipes, nor fixed scenarios. It presents a series of practical research cases and theoretical insights by experienced researchers who themselves struggled with what is probably the most meaningful questions of the science today. The practical examples of research in action are from different disciplines and include themes from health care, policy research, agricultural technology and education, in Northern and Southern context. Four leading themes of research in action are introduced in the first chapter. In the last chapter the editors return to the dilemmas research in action and try to clarify the options and responses that are possible in different situations.

Limpopo Provincial Co-operatives Policy Development Jan 18 2022

Grid-locked African Economic Sovereignty May 29 2020 The emergent so-called “Fourth Industrial Revolution” is regarded by some as a panacea for bringing about development to Africans. This book dismisses this flawed reasoning. Surfacing how “investors” are actually looting and plundering Africa; how the industrial internet of things, the gig economies, digital economies and cryptocurrencies breach African political and economic sovereignty, the book pioneers what can be called anticipatory economics – which anticipate the future of economies. It is argued that the future of Africans does not necessarily require degrowth, postgrowth, postdevelopment, postcapitalism or sharing/solidarity economies: it requires attention to age-old questions about African ownership and control of their resources. Investors have to invest in ensuring that Africans own and control their resources. Further, it is pointed out that the historical imperial structural creation of forced labour is increasingly morphing into what we call the structural creation of forced leisure which is no less lethal for Africans. Because both the structural creation of forced labour and the structural creation of forced leisure are undergirded by transnational neo-imperial plunder, theft, robbery, looting and dispossession of Africans, this book goes beyond the simplistic arguments that Euro-America developed due to the industrial revolutions.

A Scientific Bibliography of the Far Northern Drakensberg Dec 25 2019 This Scientific Bibliography of the “Far Northern Drakensberg” is a continuation by the Afromontane Research Unit of the University of the Free State (ARU) to document published and other similar works on the mountains of the summer rainfall area of South Africa. It follows “A Scientific Bibliography of the Drakensberg, Maloti and Adjacent Lowlands” which was published in 2020 (Moffett 2020), and which covered the area between the North-Eastern Cape and the North-Eastern Free State. The current work extends this northward by including articles and publications dating back to 1875 (E.Cohen, on the Lydenburg goldfields) reaching as far as the Wolkberg and Woodbush near Tzaneen in Limpopo Province. Figure 1 shows the boundary of the area covered, and although referred to as the Far Northern Drakensberg in this work, it is identical to that described as the LMEE, Limpopo, Mpumalanga & Eswatini Escarpment by Clarke et al (2022). Although slightly separate from the “lower” escarpment, the mountainous Barberton and adjacent Eswatini area, as well as the Leolo Mountains in eastern Sekhukhuneland are also included. Details on how the boundary in figure 1 was determined are given in Clark et al (2022). Bibliographies on two further ranges in the summer rainfall area, viz. the Magaliesberg in Gauteng province and the Soutpansberg in Limpopo province are to be the subject of future compilations.

Smallholder irrigation schemes in the Limpopo Province, South Africa Feb 28 2023 A survey of 76 public smallholder irrigation schemes in the Limpopo Province was jointly conducted by the International Water Management Institute (IWMI), Department of Agriculture, Forestry and Fisheries (DAFF), South Africa, and the Limpopo Department of Agriculture and Rural Development (LDARD), as part of the ‘Revitalization of Smallholder Irrigation in South Africa’ project. About one-third of those schemes was fully utilized; one-third partially utilized; and one-third not utilized in the winter of 2015; however, no single socioeconomic, physical, agronomic and marketing variable could explain these differences in utilization. Sale, mostly for informal markets, appeared the most important goal. Dilapidated infrastructure was the most important constraint cited by the farmers. The study recommends ways to overcome the build-neglect-rebuild syndrome, and to learn lessons from informal irrigation, which covers an area three to four times as large as public irrigation schemes in the province.

Implementation of a Performance Management System in the Limpopo Department of Public Works Jan 06 2021

Renewable Energy Mar 20 2022 The demand for secure, affordable and clean energy is a priority call to humanity. Challenges associated with conventional energy resources, such as depletion of fossil fuels, high costs and associated greenhouse gas emissions, have stimulated interests in renewable energy resources. For instance, there have been clear gaps and rushed thoughts about replacing fossil-fuel driven engines with electric vehicles without long-term plans for energy security and recycling approaches. This book aims to provide a clear vision to scientists, industrialists and policy makers on renewable energy resources, predicted challenges and emerging applications. It can be used to help produce new technologies for sustainable, connected and harvested energy. A clear response to economic growth and clean environment demands is also illustrated.

Practicing Social Work in Deprived Communities Aug 01 2020 This contributed volume offers a holistic understanding of social work practice in deprived communities through its thematization of understanding deprived communities globally, the development of competencies for social work practice in and with deprived communities, social work education as a community development tool, and the empowerment of social workers in deprived communities. Inequality as a globally recognized challenge is extensively elaborated within the UN Sustainable Development Goals (SDGs) and the Global Agenda program for social work, making this a timely and important contribution to the literature. Deprived communities, used in this book to mean slums, ghettos, favelas, and low-income, remote, underserved, vulnerable, impoverished, underdeveloped, disadvantaged, or less-favoured communities, exist worldwide and are conceptualized under different terms and concepts. For that reason, social work, specifically in deprived areas, is not sufficiently recognized as a specific field of practice within community work. As a result, this volume features contributions that: provide a conceptual clarification of many different terms that are used for describing deprived communities and offer a systematic literature review on community processes and effects on well-being in underdeveloped communities; map different fields of social work involvement in deprived communities with concrete practice examples; and, stress why social work as a profession needs support and how it can be empowered to improve its capacities in deprived communities. With international authorship and perspectives on social work approaches for deprived communities from India, Sub-Saharan Africa, North and Central Europe, and North America, *Practicing Social Work in Deprived Communities* is an essential resource for social workers, social work educators, and community development practitioners. The text also should be of interest to students of social work, as well as other professionals and researchers working within community development and deprived communities.
