Physical Modalities in Dermatologic Therapy Mar 29 2020 A number of vital therapeutic modalities are not covered adequately in current dermatology textbooks. This book is intended to fill that gap. It originated in a series of special lectures on modern applications of physical modalities given at recent annual meetings of the American Academy of Dermatology; the main topics were radiotherapy, electrosurgery, phototherapy, cryosurgery, and related therapeutic modalities. The authors, recognized authorities in their field, have included much additional information which could not be covered in the original lectures because of time limitations. The indications for modern dermatological x-ray therapy reflect the basic views of the recently published guide lines of the National Academy of Sciences-National Research Council. Both text and illustrations are oriented toward the practical aspects of therapy with physical modalities. A special effort was made to bring the contributions up to date; pertinent references have been added for those who wish to pursue particular topics still further. Where there is an apparent overlap between chapters, it was felt to be advantageous because different authors approached their subject from different perspectives. I am most grateful to the various authors who generously contributed despite their many other commitments. I wish, also, to thank the staff of Springer-Verlag for their advice and assistance in the preparation of the manuscript.

Conditions of Visibility Aug 15 2021 We often assume that works of visual art are meant to be

seen. Yet that assumption may be a modern prejudice. The ancient world - from China to Greece, Rome to Mexico - provides many examples of statues, paintings, and other images that were not intended to be visible. Instead of being displayed, they were hidden, buried, or otherwise obscured. In this third volume in the Visual Conversations in Art & Archaeology series, leading scholars working at the intersection of archaeology and the history of art address the fundamental question of art's visibility. What conditions must be met, what has to be in place, for a work of art to be seen at all? The answer is both historical and methodological; it concerns ancient societies and modern disciplines, and encompasses material circumstances, perceptual capacities, technologies of visualization, protocols of classification, and a great deal more. The emerging field of archaeological art history is uniquely suited to address such questions. Intrinsically comparative, this approach cuts across traditional ethnic, religious, and chronological categories to confront the academic present with the historical past. The goal is to produce a new art history that is at once cosmopolitan in method and global in scope, and in doing so establish new ways of seeing - new conditions of visibility - for shared objects of study.
