The creator of the incredibly popular webcomic xkcd presents his heavily researched answers to his fans' oddest questions, including "What if I took a swim in a spent-nuclear-fuel pool?" and "Could you build a jetpack using downward-firing machine guns?" 100,000 first printing. Your New Jersey Wills, Trusts, & Estates Explained Simply will provide all the information you need to choose, set up, and execute a will, trust, or estate. From the No. 1 bestselling author of What If? - the man who created xkcd and explained the laws of science with cartoons - comes a series of brilliantly simple diagrams ('blueprints' if you want to be complicated about it) that show how important things work: from the nuclear bomb to the biro. It's good to know what the parts of a thing are called, but it's much more interesting to know what they do. Richard Feynman once said that if you

can't explain something to a first-year student, you don't really get it. In Thing Explainer, Randall Munroe takes a quantum leap past this: he explains things using only drawings and a vocabulary of just our 1,000 (or the ten hundred) most common words. Many of the things we use every day - like our food-heating radio boxes ('microwaves'), our very tall roads ('bridges'), and our computer rooms ('datacentres') - are strange to us. So are the other worlds around our sun (the solar system), the big flat rocks we live on (tectonic plates), and even the stuff inside us (cells). Where do these things come from? How do they work? What do they look like if you open them up? And what would happen if we heated them up, cooled them down, pointed them in a different direction, or pressed this button? In Thing Explainer, Munroe gives us the answers to these questions and many, many more. Funny, interesting, and always understandable, this book is for anyone -- age 5 to 105 -- who has ever wondered how things work, and why. How does memory work? Who is the "distractor" in your family? What was the "car crash" experiment? The Psychology Book is your visual guide to the complex and fascinating world of human behavior. Discover how we learn, become emotionally bonded with others, and develop coping mechanisms to deal with adversity, or conform in a group. Get to know key thinkers, from Freud and Jung to Elizabeth Loftus and Melanie

Klein, and follow charts and timelines to make sense of it all and see how one theory influenced another. With concise explanations of different schools of psychology including psychotherapy, cognitive psychology and behaviorism, this is an ideal reference whether you're a student, or a general reader. It's your authoritative guide to over 100 key ideas, theories and conditions, including the collective unconscious, the "selfish" gene, false memory, psychiatric disorders, and autism. If you're fascinated by the human mind, The Psychology Book is both an invaluable reference and illuminating read. Olympic gold medallist and multiple world champion, Paul Goodison, explains why this book is important if you want to win races. He says: "To win sailboat races you need to sail the boat fast. This comes down to hours on the water training and tuning - there are few shortcuts to hours of practising on the water. To consistently win races you need to sail fast and smart - making the right decisions to sail the best course. If you are not the fastest boat, you are still able to win races and regattas by managing risk and sailing smart. This is where good tactics come in. But, unlike boatspeed, tactics may be learnt by thinking about each leg of the course and different situations from the comfort of your own home. Jon Emmett's new book, Tactics Made Simple, is a great tool to help fast track this learning." This book explains simply, through

hundreds of diagrams, what tactics can be applied around the race track. Individual boats in each scenario are given names so that you can easily understand what they are doing. Individual chapters take you around the race course, from before you get on the water, through the pre-start, start, different legs and manoeuvres. Each section contains detailed advice for the beginner, intermediate and advanced sailor so you can just look at the level of tactics relevant to you. Ideal for dinghy sailors, there is also a wealth of advice that will benefit yachtsmen. This is a practical way to improve your racing results, whether starting out, moving up the club circuit or competing at national level and beyond. With more than 1,800 terms, this dictionary allows you to understand almost every term you come across during your encounter with the lending process, whether you are researching the difference between trusts and liens or examining a prospective home's features. In addition to outlining terms associated with lending, it also includes information about important legislative acts and federal agencies that affect financing. The handy A-to-Z organization allows you to quickly find any information you need, even during nerve-wracking negotiations. The definitions also include any abbreviated forms of the terms, so you will be able to tell your ARMs (adjustable-rate mortgages) from your REITs (real estate investment trusts).
