**The Messianic Idea in Judaism Apr 03 2021** Gershom Scholem was the master builder of historical studies of the Kabbalah. When he began to work on this neglected field, the few who studied these texts were either amateurs who were looking for occult wisdom, or old-style Kabbalists who were seeking guidance on their spiritual journeys. His work broke with the outlook of the scholars of the previous century in Judaica—die Wissenschaft des Judentums, the Science of Judaism—whose orientation he rejected, calling their “disregard for the most vital aspects of the Jewish people as a collective entity: a form of “censorship of the Jewish past.” The major founders of modern Jewish historical studies in the nineteenth century, Leopold Zunz and Abraham Geiger, had ignored the Kabbalah; it did not fit into their account of the Jewish religion as rational and worthy of respect by “enlightened” minds. The only exception was the historian Heinrich Graetz. He had paid substantial attention to its texts and to their most explosive exponent, the false Messiah Sabbatai Zevi, but Graetz had depicted the Kabbalah and all that flowed from it as an unworthy revolt from the underground of Jewish life against its reasonable, law-abiding, and learned mainstream. Scholem conducted a continuing polemic with Zunz, Geiger, and Graetz by bringing into view a Jewish past more varied, more vital, and more interesting than any idealized portrait could reveal. —from the Foreword by Arthur Hertzberg, 1995

***Mapping Upper Canada, 1780-1867 Sep 20 2022* The early face of what is now Ontario was documented in an extraordinary number of maps. Thousands of them have survived to the present day - maps of the area as a whole, its regions, and its cities and towns. In this bibliography Joan Winearls offers a guide to maps of the province of Upper Canada/Canada West, manuscript and printed, from the beginning of British settlement up to Confederation. Each entry includes a physical description of the map, brief annotations including associated documents and sources, and information about where the map is now found. The book as a whole provides a unique resource for historians, geographers, genealogists, surveyors, archaeologists, and local history buffs. Appendices examine**

township surveys; registered plans of urban subdivisions, this describing much of the evolution of towns; nautical charts of the Great Lakes; and boundary surveys. The bibliography is fully indexed by author, place, and subject.

**FPGA Programming for Beginners Aug 19 2022** Get started with FPGA programming using SystemVerilog, and develop real-world skills by building projects, including a calculator and a keyboard Key Features Explore different FPGA usage methods and the FPGA tool flow Learn how to design, test, and implement hardware circuits using SystemVerilog Build real-world FPGA projects such as a calculator and a keyboard using FPGA resources Book Description Field Programmable Gate Arrays (FPGAs) have now become a core part of most modern electronic and computer systems. However, to implement your ideas in the real world, you need to get your head around the FPGA architecture, its toolset, and critical design considerations. FPGA Programming for Beginners will help you bring your ideas to life by guiding you through the entire process of programming FPGAs and designing hardware circuits using SystemVerilog. The book will introduce you to the FPGA and Xilinx architectures and show you how to work on your first project, which includes toggling an LED. You'll then cover SystemVerilog RTL designs and their implementations. Next, you'll get to grips with using the combinational Boolean logic design and work on several projects, such as creating a calculator and updating it using FPGA resources. Later, the book will take you through the advanced concepts of AXI and show you how to create a keyboard using PS/2. Finally, you'll be able to consolidate all the projects in the book to create a unified output using a Video Graphics Array (VGA) controller that you'll design. By the end of this SystemVerilog FPGA book, you'll have learned how to work with FPGA systems and be able to design hardware circuits and boards using SystemVerilog programming. What you will learn Understand the FPGA architecture and its implementation Get to grips with writing SystemVerilog RTL Make FPGA projects using SystemVerilog programming Work with computer math basics, parallelism, and pipelining Explore the advanced topics of AXI and keyboard interfacing with PS/2 Discover how you can implement a VGA interface in your projects Who this book is for This FPGA design book is for embedded system developers, engineers, and programmers who want to learn FPGA and SystemVerilog programming from scratch. FPGA designers looking to gain hands-on experience in working on real-world projects will also find this book useful.

**The Sense of Wonder** Jun 24 2020 First published a half-century ago, Rachel Carson's award-winning *The Sense of Wonder* remains the classic guide to introducing children to the marvels of nature In 1955, acclaimed

conservationist Rachel Carson—author of *Silent Spring*—began work on an essay that she would come to consider one of her life’s most important projects. Her grandnephew, Roger Christie, had visited Carson that summer at her cottage in Maine, and together they had wandered the surrounding woods and tide pools. Teaching Roger about the natural wonders around them, Carson began to see them anew herself, and wanted to relate that same magical feeling to others who might hope to introduce a child to the beauty of nature. “If a child is to keep alive his inborn sense of wonder,” writes Carson, “he needs the companionship of at least one adult who can share it, rediscovering with him the joy, excitement and mystery of the world we live in.” Now available in paperback, *The Sense of Wonder* is a timeless volume that will be passed on from generation to generation, as treasured as the memory of an early-morning walk when the song of a whippoorwill was heard as if for the first time. Featuring serene color photographs from renowned photographer Nick Kelsh, “this beautifully illustrated edition makes a fine gift for new and prospective mothers and fathers” (Gregory McNamee), and helps us all to tap into the extraordinary power of the natural world.

Scholarly Knowledge Dec 11 2021 Any attempt to understand the roles that textbooks played for early modern teachers and pupils must begin with the sobering realization that the field includes many books that the German word *Lehrbuch* and its English counterpart do not call to mind. The early modern classroom was shaken by the same knowledge explosion that took place in individual scholars' libraries and museums, and transformed by the same printers, patrons and vast cultural movements that altered the larger world it served. In the fifteenth through seventeenth centuries, the urban grammar school, the German Protestant Gymnasium and the Jesuit College, all of which did so much to form the elites of early modern Europe, took shape; the curricula of old and new universities fused humanistic with scholastic methods in radically novel ways. By doing so, they claimed a new status for both the overt and the tacit knowledge that made their work possible. This collected volume presents case studies by renowned experts, among them Ann Blair, Jill Kraye, Juergen Leonhardt, Barbara Mahlmann-Bauer and Nancy Siraisi.

**Producing Video For Teaching and Learning Oct 09 2021** Producing Video for Teaching and Learning: Planning and Collaboration provides lecturers, researchers, professors, and technical staff in educational settings with a framework for producing video resources for teaching and learning purposes. This highly useful guide brings together the literature from the field into a constructive, developmental framework, prompting users to reflect on their own ideas at each stage of the production process.

O'Donoghue makes clear distinctions between related aspects of video production, and offers working definitions where appropriate in order to address the academic and tertiary support technical audience. Interviews with established professionals in the field illustrate the possibilities—and limitations—of video for teaching and learning. Producing Video for Teaching and Learning gives readers the power to enhance the learning capacity of their own video materials.

**Fwa 1 May 04 2021** Farrago's Wainscot is a quarterly online zine that collects the weird and sublime in fiction and poetry. Words cannot be arranged in too strange a fashion for Old Man Farrago, and FWA 1 is the collected assortment of stories from the first year of the Wainscot's revival. Brand new! Fantastically fresh! With dogs in sweaters! Maybe not that last part, but everything else in the previous paragraph is true in the most literary weird sense possible, because that's what one comes to expect with the Wainscot.

**Sabbatai Şevi Feb 25 2023 Gershom Scholem stands out among modern thinkers for the richness and power of his historical imagination. A work widely esteemed as his magnum opus, Sabbatai Şevi offers a vividly detailed account of the only messianic movement ever to engulf the entire Jewish world. Sabbatai Şevi was an obscure kabbalist rabbi of seventeenth-century Turkey who aroused a fervent following that spread over the Jewish world after he declared himself to be the Messiah. The movement suffered a**

severe blow when Şevi was forced to convert to Islam, but a clandestine sect survived. A monumental and revisionary work of Jewish historiography, Sabbatai Şevi details Şevi's rise to prominence and stands out for its combination of philological and empirical authority and passion. This edition contains a new introduction by Yaacob Dweck that explains the scholarly importance of Scholem's work to a new generation of readers.

***C Programming for Embedded Microcontrollers* Dec 31 2020** Technology is constantly changing. New microcontrollers become available every year and old ones become redundant. The one thing that has stayed the same is the C programming language used to program these microcontrollers. If you would like to learn this standard language to program microcontrollers, then this book is for you! ARM microcontrollers are available from a large number of manufacturers. They are 32-bit microcontrollers and usually contain a decent amount of memory and a large number of on-chip peripherals. Although this book concentrates on ARM microcontrollers from Atmel, the C programming language applies equally to other manufacturers ARMs as well as other microcontrollers. The book features: Use only free or open source software; Learn how to download, set up and use free C programming tools; Start learning the C language to write simple PC programs before tackling embedded programming -- no need to buy an embedded system right away!; Start learning to program from the very first chapter with simple programs and slowly build from there; No programming experience is necessary!; Learn by doing -- type and run the example programs and exercises; Sample programs and exercises can be downloaded from the Internet; A fun way to learn the C programming language; Ideal for electronic hobbyists, students and engineers wanting to learn the C programming language in an embedded environment on ARM microcontrollers.

***Archaeological Map of Nymphaion (Crimea)* Mar 14 2022** The Archaeological Map of Nymphaion is just one of the results of a five-year-long period of (1993-1997) Polish-Russian-Ukrainian cooperation carried out within the terms of reference of the project: "Nymphaion: the History and Structure of a Greek polis." International studies of this Greek colony,

probably established by Miletus in the 6th century B.C.,<sup>1</sup> were begun in 1993 at the suggestion of the then director of the Kerc Museum, professor Eleonora Jakovenko. Within the boundaries of international agreements subsequently reached, the participants in the project were: the Archaeological Museum in Kerc and the Hermitage Museum in Saint Petersburg (from 1993), the State Committee for the Protection of Historical Monuments of Crimea in Simferopol' (from 1994), the Centre National de la Recherche Scientifique in Nantes (from 1994), and, from the very beginning, as one of the parties initiating the cooperation, the Institute of Archaeology and Ethnology at the Polish Academy of Sciences, Warsaw. Without a special agreement the work was shared out between other institutions, especially the Institute of Archaeology at Warsaw University (from 1993) and, as the necessity arose, by employees of the Institute of History at the University of Wroclaw, the Institute of Geological Sciences at Polish Academy of Sciences, and the Arbeitsgruppe Archäologie der Freien Universität, Berlin. The aim of the Project was to study the history and structure of a Greek colony, Nymphaion<sup>2</sup> in its totality. This embraced the investigation - of both the town and its rural hinterland (chora), as well as various aspects of the life of its inhabitants in Antiquity, i.e., economy, culture, and social and ethnic relations. For this end various categories of source material were used: archaeological, iconographic, literary, epigraphic, and palaeozoological ones, as well as various methods: field survey, excavation, geophysical and underwater survey, cartography, and analysis of satellite pictures. It was intended to carry out parallelly various forms of research work, i.e., field work, studies of source materials, studies of selected historical problems, preparation of publications, and working conferences (of the round table type). It seems appropriate to explain why Nymphaion, a relatively small, but important colony located to the south of Kerc (ancient Pantikapaion), on the western shore of the Kerc Strait (Bosphorus Cimmericus), was selected as a subject of the investigation. Nymphaion became the focus of our interest because it provided optimum conditions for the accomplishment of the aims of the Project. Firstly, it was a relatively small colony (in comparison to, e.g., Pantikapaion or Olbia), and thus it was easier to study the problems involved in their totality. Secondly, the neighbourhood of the Ancient town is not covered with buildings and this made it possible to study the chora. Finally, and perhaps most importantly for our part, the excavations conducted in the area of the town since 1939 by the Hermitage Museum have yielded impressive results, which offered further interesting research prospects. So far a large section of fortifications, numerous sanctuaries, residential buildings, and other structures have been uncovered. During the 5 year long research, the ambitious (as we had realised from the very beginning) plans were carried

out to a different extent: some topics have been thoroughly examined, other ones shall soon be presented in publications, some have been abandoned. The current state of these various avenues of research is presented in recent publications and literature.
