Learn how to read and understand financial statements prepared according to GAAP and non-GAAP standards Compare CFROI, EVA, Valens, and other non-GAAP methodologies to determine how accurate companies' reports are Improve your business decision making, stock valuations, or merger and acquisition strategy Develop the essential skill of quickly and accurately gathering and assessing information from financial statements of all types Professional analysts, investors, and students will gain valuable knowledge from this updated edition of the popular guide. The Fundamentals of Financial Statement Analysis as Applied to the Coca-Cola Company Mar 29 2020

Recent stock market crises are exacerbated by investors who don't understand what has been happening to companies because investors lack an understanding of financial ratio analysis. Stock markets are efficient in that they incorporate, and even anticipate, information about companies based on financial accounting data provided by companies. However, market efficiency results from extensive analysis performed by financial analysts. Much of this financial analysis is based on the analysis of financial information provided by companies and analyzed using financial ratio analysis. This book provides a step-by-step demonstration of how to download data from Internet sources, transfer the data to a spreadsheet, and conduct a financial ratio analysis of any company. The book outlines the steps needed to perform a financial ratio analysis, the financial statements to be retrieved from EDGAR, and the five categories of financial ratios used in the financial analysis of the company. The data retrieved from the financial statements is copied to a worksheet and used to compute and graph the financial ratios. The ratios and graphs are used to determine the performance drivers of this company.

Financial Statement Analysis Aug 03 2020

Knowledge Creation Jun 12 2021 Financial statement analysis involves an understanding of an entity by applying analytical techniques to its accounting numbers. However, financial statement analyses are going through a transformation similar to the manufacturing age changing to information centered orientation. That is, it is no longer sufficient to understand the tools for analysing financial accounting information. Other types of relevant information that are not directly captured by financial statement information have a profound effect on creditors, investors, reporting bureaus, governmental agencies and regulators. This text differs from other financial statement textbooks in that it not only takes the traditional analysis of financial information, but also management and economic information that is not directly measurable or easily derived from financial accounting reports. Further, this textbook emphasises the measurement and valuation of brand, sustainability, ethical systems and trusts systems. Moreover, this text also differs in that it provides a modeling viewpoint of information analysis linked with decision makers perception and judgments before arriving at a decision. The modeling perspective enhances financial statement analysis by: 1. Including not only financial information, but also management and economic information; 2. Combining the passive tools used in investment and financial analysis (eg: ratio analysis) with individuals framing of the problem (perception) and analysis (judgment) before arriving at a decision; 3. Viewing information analysis through a camera lens reinforced by a basic two stage modeling approach in order to support decisions regarding a particular course of action to implement. Further, this text transforms what other financial statement analysis textbooks emphasise as an input-output and static analysis approach to a more dynamic and process approach. In addition, this textbook divulges from a financial analysis viewpoint to a knowledge creation perspective. This new knowledge creation perspective is intended for upper level undergraduates and graduate students, such as accounting, economic, finance, information systems, marketing, organisational behavior students, and psychology and sociology students. In addition, this book can be beneficial to government, non-profit and business oriented individuals.
