Climbing the Charts examines how songs rise, or fail to rise, up the radio airplay charts. Looking at the relationships between record labels, tastemakers, and the public, Gabriel Rossman develops a clear picture of the roles of key players and the gatekeeping mechanisms in the commercial music industry. Along the way, he explores its massive inequalities, debunks many popular misconceptions about radio stations' abilities to dictate hits, and shows how a song diffuses throughout the nation to become a massive success. Contrary to the common belief that Clear Channel sees every sparrow that falls, Rossman demonstrates that corporate radio chains neither micromanage the routine decision of when to start playing a new single nor make top-down decisions to blacklist such politically inconvenient artists as the Dixie Chicks. Neither do stations imitate either ordinary peers or the so-called kingmaker radio stations who are wrongly believed to be able to make or break a single. Instead, Rossman shows that hits spread rapidly across radio because they clearly conform to an identifiable style or genre. Radio stations respond to these songs, and major

labels put their money behind them through extensive marketing and promotion efforts, including the illegal yet time-honored practice of payoffs known within the industry as payola. Climbing the Charts provides a fresh take on the music industry and a model for understanding the diffusion of innovation. Praise for Detail Process Charting "A must-read for any competitive organization, Detail Process Charting: Speaking the Language of Process provides a comprehensive, yet clear, explanation of how to utilize one of the most powerful tools available to improve work processes. [Graham] has successfully integrated the history, success stories, and wisdom of those in the field who have applied this time-tested tool." -Jim Denyes, Training Manager Naval Occupational Safety and Health, and Environmental Training Center Author, Work Smarter, Not Harder "This book will be a valuable resource for all those interested in work simplification and its implementation. Excellent answers to the 'who,' 'what,' 'when,' 'how,' and 'why' of work simplification are provided in an understandable and very useful level of detail. Graham has obviously 'been there, done that.' " -John A. Roberts III, Adjunct Professor School of Business Administration, University of Dayton "The keys to this approach . . . are the involvement of the workers and the simplicity of the charting approach. Even those participants who have never seen a process chart can almost instantly see how the process works, their role in it, and how it can be improved. This level of involvement means continuous buy-in, which significantly improves the chances of success. The emphasis on the document as the key process element and the ability to diagram the document to flow easily, rapidly, and clearly set this approach apart from all the others." -Fredric D. Heilbronner, Director of Systems Consulting, eForms Digital Consulting & Software Services, Inc. "Much has been written about charting and business systems analysis, but I have not seen anything as comprehensive and clear as Ben Graham's book. Writing in simple, easy-to-follow language with plentiful illustrations and practical examples, this book takes the reader through the full spectrum of the charting process from initial analysis to managing charting libraries. This book is a must-have for all process improvement analysts and managers wanting to improve their organizational efficiency." - Robert Barnett, Managing Director Robert Barnett and Associates Pty. Ltd. 'Climbing the Charts' examines how songs rise, or fail to rise, up the radio airplay charts. Looking at the relationships between record labels, tastemakers, and the public, Gabriel Rossman develops a clear picture of the roles of key players and the gatekeeping mechanisms in the commercial music industry. Dataviz--the new language of business A good visualization can communicate the nature and potential impact of information and ideas more powerfully than any other form of communication. For a long time "dataviz" was left to specialists--data scientists and professional designers. No longer. A new generation of tools and massive amounts of available data make it easy for anyone to create visualizations that communicate ideas far more effectively than generic spreadsheet charts ever could. What's more, building good charts is quickly becoming a need-to-have skill for managers. If you're not doing it, other managers are, and they're getting noticed for it and getting credit for contributing to your company's success. In *Good Charts*, dataviz maven Scott Berinato provides an essential guide to how visualization works and how to use this new language to impress and persuade. Dataviz today is where spreadsheets and word processors were in the early 1980s--on the cusp of changing how we work. Berinato lays out a system for thinking visually and building better charts through a process of talking, sketching, and prototyping. This book is much more than a set of static rules for making visualizations. It taps into both well-established and cutting-edge research in visual perception and neuroscience,

as well as the emerging field of visualization science, to explore why good charts (and bad ones) create "feelings behind our eyes." Along the way, Berinato also includes many engaging vignettes of dataviz pros, illustrating the ideas in practice. *Good Charts* will help you turn plain, uninspiring charts that merely present information into smart, effective visualizations that powerfully convey ideas.
