Psychiatrists will find the logical structure, substantive questions, and thorough explanations provided by the Study Guide for the Psychiatry Board Examination to be as reassuring as they are educational. Although readers are advised to consult a range of resources in preparation for the examination, this guide is indispensable. The guide is designed for maximum usefulness, with specific features and attributes to support knowledge recall and successful examination performance. * The authors are from a cross-section of accomplished students, fellows, and junior and senior faculty, all of whom have faced or will face the board examination and who understand its importance to the profession.* Topics were determined by the American Board of Psychiatry and Neurology Certification Examination in Psychiatry 2015 Content Blueprint.* The approximately 400 questions were formulated from information extracted from widely available American Psychiatric Publishing textbooks and accurately reflect the accepted psychiatric knowledge base.* Each multiple choice question is followed by an explanation of why the correct answer is correct and the others are incorrect, and every question and explanation is referenced, directing the reader to the primary material for more in-depth learning and study.* The volume was designed as a study guide for both the initial psychiatry board examination and the recertification examination. The Hospital Neurology Book Apr 28 2020 A practical, protocol-oriented guide to the practice of neurology in the hospital setting A Doody's Core Title for 2019! Hospital neurology is one of the fastest growing subspecialties within neurology. Running an efficient and effective neurohospitalist line is important to the financial success of hospitals and the physicians employed there. Many neurology patients also have internal medicine problems, and often it is a general hospitalist without neurology training who treat these patients. These physicians sorely need more information on neurology. Conversely, neurologists caring for these patients have only had one year of internal medicine training and require more guidance on medical problems. Given these realities, there is a need for a resource on hospital neurology. With The Hospital Neurology Book, Drs. Salardini and Biller have created a practical, concise, and useful work that guides both neurologists and internists in the areas in which their training is currently not sufficient for hospital practice. The Hospital Neurology Book features a highly readable format, providing information physicians can act upon, including recipes and protocols for patient care and question-based chapter headings that lead physicians to the exact issue they are dealing with in the moment. Each chapter (or chapter section as appropriate) opens with a case study, setting the stage in a highly practical manner, and ends with high yield summary points useful for consolidating learning.

Don't Medicate-Educate! Oct 03 2020 Dr. Slaff writes about her personal and professional involvement in autism. She discusses her identical twin brothers' and daughter's life-threatening behaviors-one requiring surgery-and how her brothers' different residential placements have made them so different. She discusses the controversy of aversive skin shock, a research-based treatment that saved her brother's life. She describes the dangers of psychotropic medications, particularly for individuals with developmental disabilities, and how her brothers experienced devastating side effects. She examines how medication is frequently substituted for behavioral educational interventions. She talks about termination of services after individuals turn twenty-one. She writes about her own experiences treating individuals with developmental disabilities. She discusses her advocacy with school districts and other government officials and what must be done to improve services. She makes recommendations to parents to identify and obtain the treatments their loved ones need. Excerpts from Don't Medicate-Educate! Many individuals are not receiving the educational therapies they need, including applied behavior analysis, so their behaviors are not under control. Many end up needing residential placements and chemical and physical restraints just so no one gets hurt. The chemical restraints, as shown in my brothers' experiences, do not always work to stop the danger. One of the reasons for the system's reliance on chemical restraints is risk aversion: if a patient displays dangerous aggression or suffers a self-injury when behavioral therapies are not available, the doctor can be sued for malpractice for not prescribing medication or other treatment. The first four chapters discuss my personal experiences with my family members who have autism and the struggles to obtain effective treatment. The book discusses how one brother has been doing well with effective treatment, while his twin has done poorly. It also discusses effective treatment for my daughter. To determine if a treatment is effective or dangerous requires research. In chapter 5, I discuss published research on positive-behavior treatments, aversives, and psychotropic medications used to treat individuals with autism or other developmental disabilities. The discussion includes specific risks to individuals with autism and developmental disabilities in general. I also discuss what is actually being implemented in real-life settings and advocating for evidence-based treatment. Recommendations to improve access to effective interventions are discussed in chapter 6. In the appendix, I have included a history of evidence-based treatments utilized in autism to familiarize readers to topics discussed throughout this book. FROM KIRKUS REVIEW In Slaff's debut book, a psychiatric chronicle that straddles the genres of memoir, case study, and position paper, readers learn the story of one woman's struggle to care for family members with autism. They also discover what that effort has taught her about

medicine, politics, education, risk, and the necessity "to seek my own answers and not blindly follow others." After this affecting opening, in which the doctor and sister whom readers have come to admire sees her "nightmares of having a child with autism" come true, the book becomes a detailed support manual for people undergoing the same trials and a thoroughly researched testimonial to the effectiveness of aversive therapy. The lucid work also delivers a short, useful history of the ways that therapy has been misused (as a treatment for homosexuality) and mischaracterized (in reports by Geraldo Rivera and Connie Chung). "People do not choose to have autism or any other disability, but we can choose to love and take care of them," the author reminds readers. She proves herself a fine exemplar of this care and love in this engrossing and persuasive work.

Neurology Oral Boards Review Apr 01 2023 It was 6 AM and the New Orleans Hilton lobby was dotted with young neurologists in suits wandering aimlessly, many mumbling to themselves, all with the eyes of a rough night on call. This was the morning of my Oral Board examination. Despite

three years as a neurology resident, additional time as a fellow, and the experience of having performed probably more than 1000 neurological examinations by this time, I was deathly afraid of what this day would bring. The exam organizers had met with us the day before and given the overwhelming message to "RELAX. " Certainly, this is sound advice prior to any examination, but the requisite for passing is knowing the material. This requires preparation, as well as practice. An excellent first step is to use Eroboghene Ubogu's Neurology Oral Boards Review in the months before you begin studying for the Boards in earnest. A quick read will provide an internal assessment of your strengths and weaknesses, which should guide the study plan. The major neurology textbooks, which anyone sitting for the Boards should already have in their possession, should be studied. Finding a senior faculty member to quiz you is very helpful. There is no substitute for finding one of your former residency supervisors or a senior colleague in your group practice to perform a simulated Oral Board session.
