"Here's a delightful little book to warm the hearts of young children and teach them how to experience the joy of giving and receiving. Just think of all the little buckets this book will fill with love and encouragement." —Dr. Kevin Leman, author of Have a New Kid by Friday The day you were born was a very happy day. You are a special gift. Everyone was so happy to see you. But, there was one part of you that they could not see. It was your bucket, your invisible bucket. While using a simple metaphor of a bucket full of hearts and stars, authors Carol McCloud and Katherine Martin, M.A. illustrate, in the sweetest of ways, that we are all born with an invisible bucket and that our bucket holds all of our good thoughts and feelings. This book highlights the many ways that families and caregivers use to fill the buckets of children but also gives young children simple ideas on how to BE a bucket filler as well. This 24-page picture book is perfect for children,

parents, grandparents, teachers and people that want to teach empathy, nurture kindness and create a positive environment in their home, classroom, workplace and community. Winner of 4 awards. Due to high comorbidities with depression, anxiety, substance abuse, and other mental disorders, along with considerable behavioral dysfunction, adult ADHD is even more common in clinical populations than the general public. When an ADHD diagnosis is missed, psychotherapy is often frustrating and less effective. *Could it be Adult ADHD? is for mental health professionals who wish to learn how to recognize, assess, and treat adult ADHD.* Written in a style maximally accessible to the practicing mental health professional, this book educates early-career psychotherapists and experienced professionals alike on the disorder and its treatment. Author Jan Willer provides a full description of adult ADHD symptoms, based on the most current research, including executive functioning problems, emotional dysregulation, atypical reward sensitivity, and problems with time perception. Recognizing patterns of dysfunction is essential to identify ADHD, so two detailed composite cases are presented, along with supplemental case material. Strengths that may be associated with ADHD are described. Willer offers guidance on providing psychoeducation about cognitive differences in ADHD, which is essential for client self-acceptance and adaptive functioning. Common psychotherapy problems with ADHD clients are addressed, including chronic lateness to sessions, missed appointments, motivation problems, difficulties with homework, and tangentiality. Willer also discusses medications for ADHD, including their benefits, contraindications, and side effects, and reviews the effectiveness of non-traditional treatments.
